Objective

I'm Ganesh Karadkar, a B.Tech Computer Engineering student passionate about full-stack development, backend systems, AI-powered applications, and problem solving through Data Structures & Algorithms. I build scalable, production-ready web applications using modern technologies like React, Next.js, Node.js, Express.js, and MongoDB while focusing on clean architecture and performance.

Education

- AMG kolhapur** Parsing
B.Tech Computer science and engineering
8.0 CGPA
- Government polytechnic Ambad** 2021-2023
Diploma in computer science and engineering
80%
- New english school Tembhurni** 2020
10th SSC board
92%

Skills

- Full Stack development
- Backend development
- Data structure and algorithms
- React js
- Node js
- C programming, c++, Java, Python , JavaScript

Projects

- Smart LT Line Fault Detection System**
An IoT-based Smart LT Line Fault Detection and Monitoring System built using MQTT, Node.js, MongoDB, React.js, Next.js, and Leaflet Maps. The system continuously monitors LT electrical poles in real-time, detects line faults, overloads, and power theft conditions, and visualizes live pole status on an interactive dashboard. Integrated Twilio SMS alerts notify users instantly when faults occur. The platform includes live map tracking, real-time telemetry, MQTT communication, cloud deployment using Render and Vercel, and a responsive monitoring dashboard for smart grid management.
- Personal Chatbot**
Personal LLM for personal usage.
